Introduction

The Enclosure Series is complete display solution designed to decrease development time by integrating simple input, output, and display interfaces into a robust external enclosure. With USB communication speeds of up to 115.2kbps and a convenient rear mounting point, the Enclosure Series provides the perfect interface solution for any project.

The simple command structure permits easy software control of many settings including backlight brightness, screen contrast, and baud rate. User input on is available through a built-in, backlit seven key tactile keypad. Three bi-colour LEDs provide visual outputs on each model, a buzzer on the GLK model provides audio feedback, and the built-in USB cable provides a multi-platform interface.

For the LK model, on board memory provides up to forty custom characters which can be saved within the unit and recalled for start screens, bar graphs or larger numbers. And the GLK provides a whopping 256KB for customizable fonts and bitmaps to enhance the graphical user experience.

The versatile Enclosure Series, with all the features mentioned above, is available in a variety of colour and material options to suit almost any application.

Features

Mini USB Connector

The Enclosure Series comes with a familiar USB Connector to fulfill both communication and power needs. The standard A-style connector can be mated to any device with a USB-A header. Most commonly used with a PC, this connection creates a virtual com port that offers a simple power solution with a familiar communication scheme.

Pin	Function
1	Vcc
2	D-
3	D+
5	Gnd

LED Indicators

The Enclosure Series has 6 General Purpose Outputs which control 3 bi-colour LEDs. Red, green, and orange-yellow colours can be created using these software controlled GPOs. Odd numbered GPOs control red while even numbers switch the green aspects of the LEDs, as shown in the table to the right.

Figure 6: LED Location

Table 2: LED Output

Colour	GPO _O	GPO _E
Yellow	0	0
Green	0	1
Red	1	0
Off	1	1

Keypad Input

The Enclosure Series includes a 7 key, matrix style, embedded keypad and may be configured to allow key presses to be automatically transmitted or polled. The keypad can also be configured for typematic or auto-repeating key presses. The keypad is scanned only when pressed to reduce electrical noise and decrease latency to ensure key input is received quickly and correctly every time.

Manual Override

The Manual Override is provided to allow the Enclosure Series to be temporarily reset to factory defaults.

1. Disconnect power from your display.
2. Hold down the bottom left button.
3. Reconnect power to your unit, and wait for the start screen before releasing the button.
4. Set and save all pertinent settings.

Parameter	Value
Backlight	255
Contrast	128
Baud Rate	19200

Commands

An extensive list of commands and additional display information can be found in the LK204-7T-1U and GLK19264-7T-1U display manuals at www.matrixorbital.ca/manuals.

Quick Connect

USB Connections

The USB connection provides a quick, easy solution for PC development. After driver installation, the Enclosure Series will be accessible through a virtual serial port.

1. Make the connections.
 - Plug the regular, A-style USB header into your computer USB jack.
2. Install the drivers.
 - a. Download the latest drivers at www.matrixorbital.ca/drivers, and save them to a known location.
 - b. When prompted, install the USB bus controller driver automatically
 - c. If asked, continue anyway, even though the driver is not signed
 - d. When the driver install is complete, your display will turn on, but communication will not yet be possible.
 - e. At the second driver prompt, install the serial port driver automatically
 - f. Again, if asked, continue anyway
3. Create.
 - Use uProject or a terminal program to get started, and then move on with your own development. A number of application notes are available at www.matrixorbital.ca/appnotes.

Troubleshooting

Display

If your display is powered successfully, the Matrix Orbital logo, or user created screen should display on start up. If this is not the case, check out these tips.

- Check that your device drivers are installed correctly. In the device manager you should see a USB Serial Port object in the USB controllers section as well as an entry in the Ports section.
- Ensure the contrast is not too high or too low and that the backlight is on. See the Manual Override section to reset these values to default.
- It is possible to overwrite the Matrix Orbital logo start screen, if this happens the screen may be blank. Try writing to the display to ensure it is functional, after checking the contrast above.

Communication

When communication of either text or commands is interrupted, try the steps below.

- Try using a different USB port or utilize a USB hub.
- Ensure that the host system and display module are both communicating on the same baud rate. The default rate for the display module is 19200 bps.
- Unlock the display. See the Set and Save Data Lock command for more info.
- Finally, the display can be reset to defaults using the Manual Override procedure above.
