EXPCABLE-BR1

EXPCABLE-BR1 is a 6" flat cable that connects the expansion connectors of our microcontroller boards to a standard breadboard for ease of prototyping. One end of EXPCABLE-BR1 plugs into the 20-pin expansion connector on the MINI-MAX and PRO-MAX boards. The other end of EXPCABLE-BR1 plugs to the middle of a breadboard as shown below. This allows easy access to microcontroller port pins and simplifies interfacing the microcontroller board to your own circuits.
